Actividad 2.1: LinkedLists

Create

```
void LinkedList<T>::create(T data, int index)
      std::cout << "No hay suficientes elementos para insertar el valor " << data << " en la posicion: " << index << std::endl;
      std::cout << "Esa posicion no existe" << std::endl;</pre>
   Node<T> *current = head;
   while (pivot < index - 1)</pre>
       current = current->getNext();
   Node<T> *newNode = new Node<T>(data, current->getNext());
   current->setNext(newNode);
```
